

Prince Castle 340-URT

With the Angus rollout around the corner, we wanted to share some information regarding the Angus buns as it relates to the Prince Castle 340-URT toaster. The Prince Castle 340-URT toaster tend slots have been designed to accommodate the Angus buns.

The Angus buns are to be placed in the end slots only as shown below.

Soon after the 340-URT was released, the Angus bun was introduced. Prince Castle proactively upgraded all the early version toasters by removing the lane dividers on the outside slots to accommodate the Angus Buns. All new production going forward was designed to accommodate the Angus bun. Any toaster with serial number starting with JB-##### and after will accommodate the Angus buns and no action is required by the restaurant.

If a restaurant has an early model Prince Castle URT toaster and has not had the Angus upgrade they can call **1-800-PCASTLE (722-7853) Ext 1** and a servicer will be dispatched
