

➤ **Bun Temperature Check Replaces the Coffee Cup Method:**

- Requires a pyrometer & needle probe
- Easier, faster, less complicated

➤ **Helps identify issues with the toaster or bun handling to ensure a great toasted bun each time.**

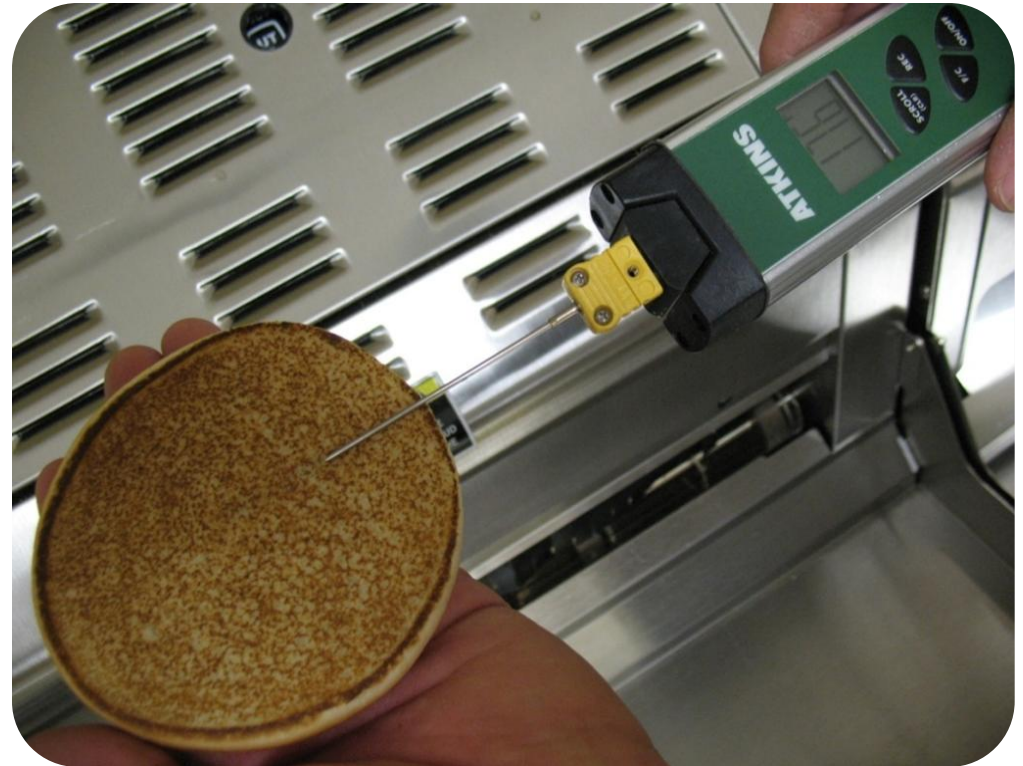

➤ **Weekly Procedure:**

- Toast a Regular Bun crown – within 5 seconds take one reading . Probe just below the surface in the center as shown.
- Toast a Regular Bun heel – repeat the procedure.
- Repeat the procedure for a Big Mac club if you have a Universal toaster.
- The temperature of the Regular crown, heel and Big Mac club should be a minimum of 160° F.

➤ **Repeat the test if you do not meet the minimum temperature**

➤ **If the minimum temperature still is not met:**

- Check toaster settings
- Check buns are within code date
- Check for proper bun thaw

## Weekly Bun Temperature check – from Nabit update June 2007
